http://www.eurisgic.eu/

Ground magnetic field and conductivity model \rightarrow electric field

Electric field and DC model of a conductor system \rightarrow GIC

Real-time application

http://space.fmi.fi/image/realtime/UT/ http://space.fmi.fi/image/realtime/eurisgic/

Space Weather and Challenges for Modern Society, TIEMS Oslo Conference 22-24 October 2012

Envelopes of northward and southward magnetic field variations

IMAGE near-real-time data until 15-Mar-2012 17:20:10 UT

Space Weather and Challenges for Modern Society, TIEMS Oslo Conference 22-24 October 2012

Estimated amplitudes of **eastward** and **westward** electrojets

estimated electrojets until 15-Mar-2012 17:20:10 UT

Space Weather and Challenges for Modern Society, TIEMS Oslo Conference 22-24 October 2012

Largest storm of the present solar cycle (so far) - top 4 since 1999

Space Weather and Challenges for Modern Society, TIEMS Oslo Conference 22-24 October 2012

Measured GIC and dX/dt

Mantsala 20120315 (10-s values)

Space Weather and Challenges for Modern Society, TIEMS Oslo Conference 22-24 October 2012

Estimated sum of GIC

Demonstration with the model of the old Finnish 400 kV power grid GIC activity can be quantified based on statistics of 1996-2008

15 Mar 2012 was a 'once per year' event

Space Weather and Challenges for Modern Society, TIEMS Oslo Conference 22-24 October 2012

Next step: Prototype forecast server for whole Europe based on space plasma simulations using in-situ solar wind data

Gasum Oy is acknowledged for collaboration in GIC recordings in the Finnish natural gas pipeline. The research leading to these results has received funding from the European Community's Seventh Framework Programme (FP7/2007-2013) under grant agreement no 260330.
